

Courbes d'apprentissage — Oneiro sur Crafter

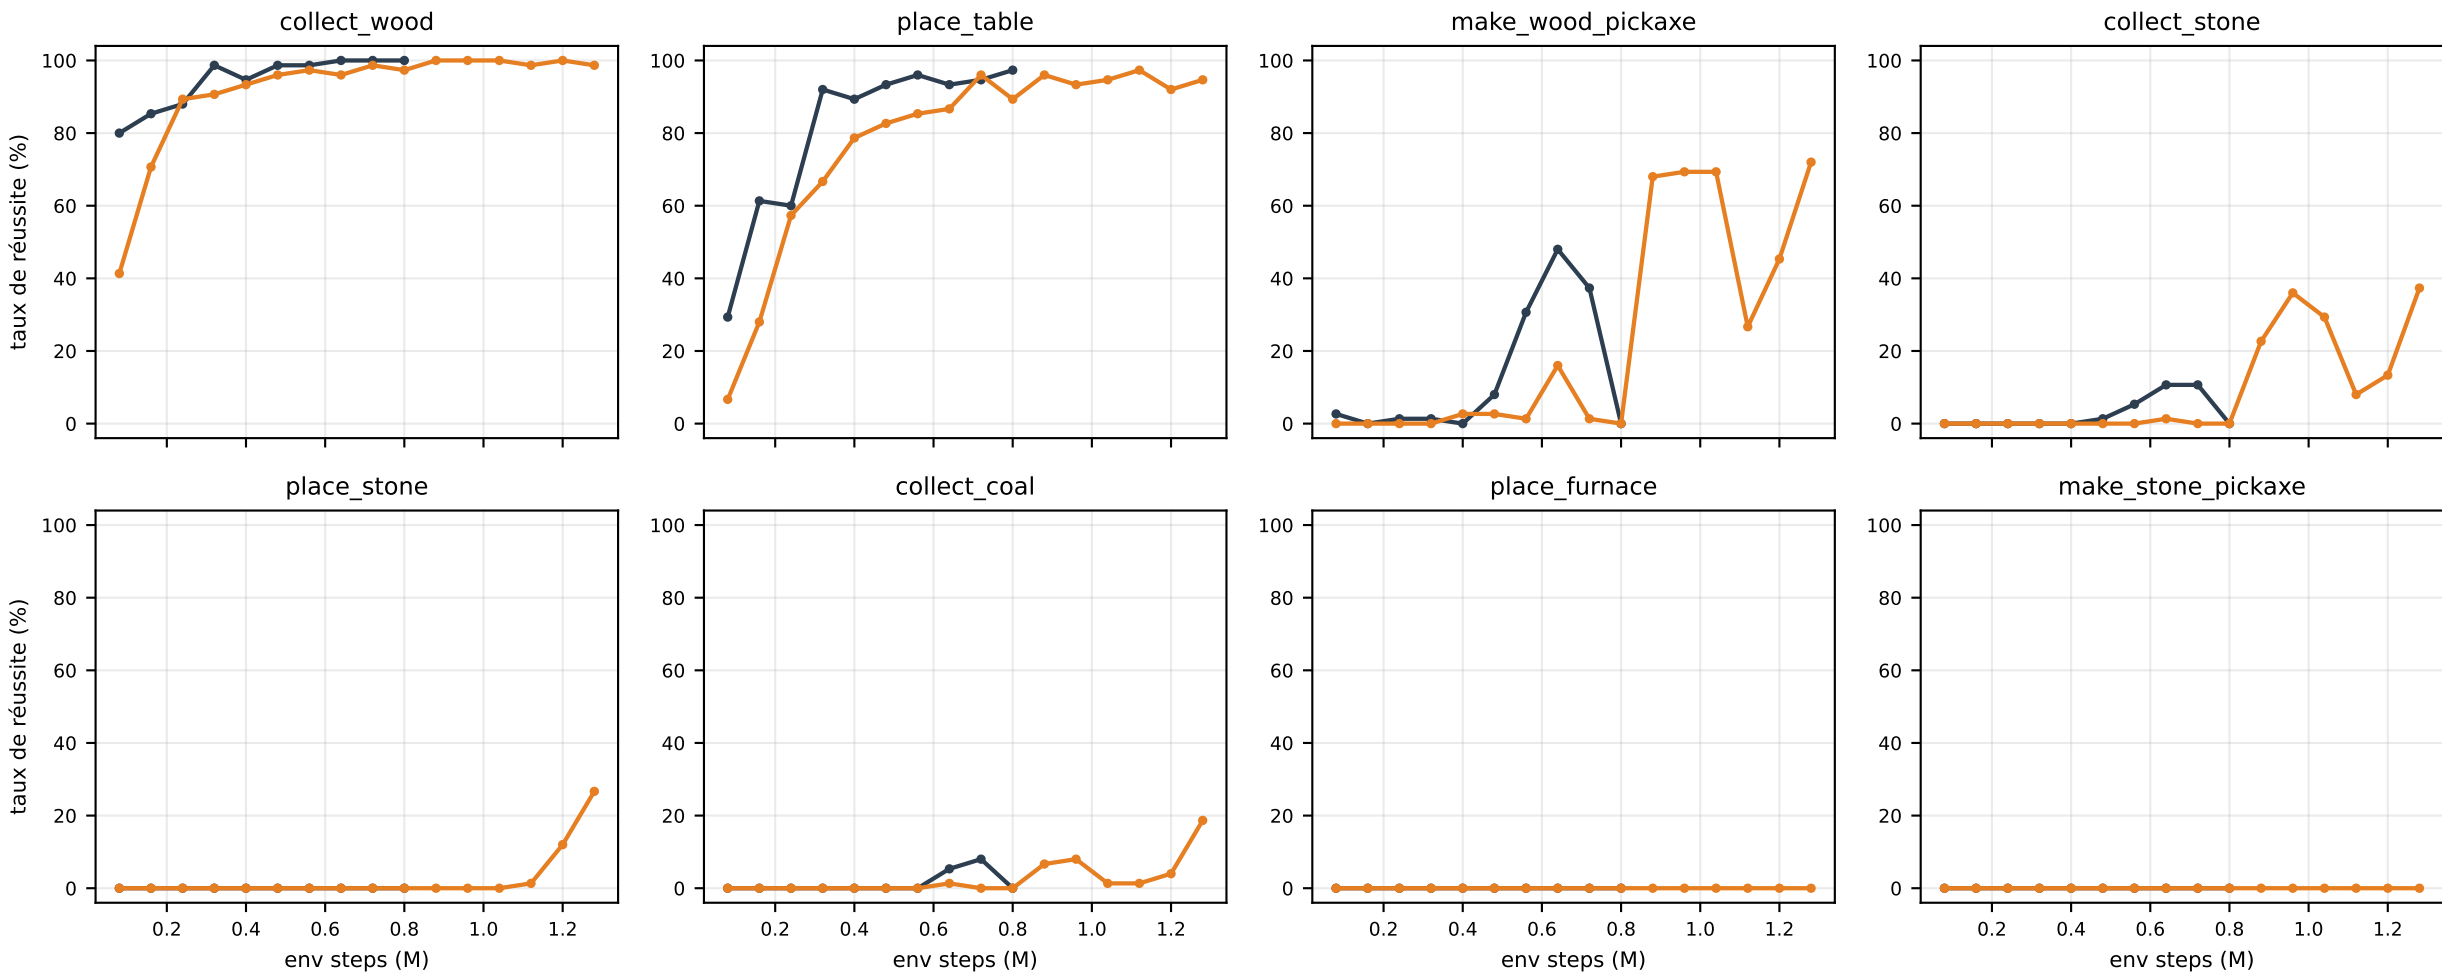

Achievements par épisode (trait plein : argmax — pointillé : sample)

Crafter score vs baselines publiées (protocole officiel, cumulé)

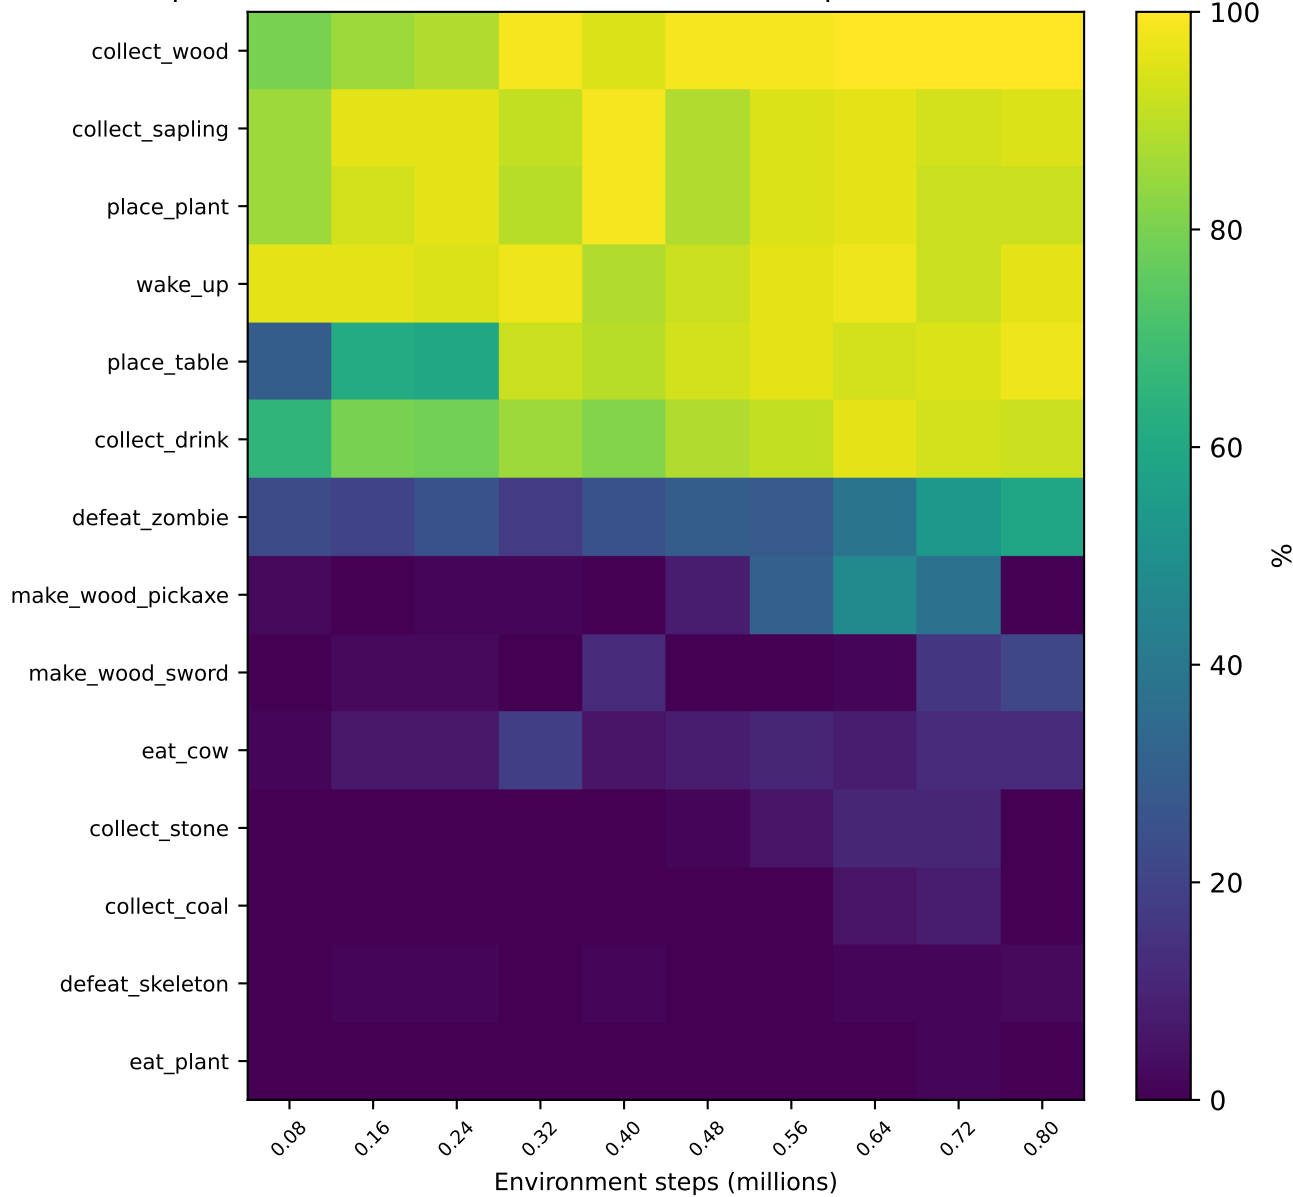

Arbre du craft — chaque palier ouvre le suivant (ordre des prérequis de data.yaml)

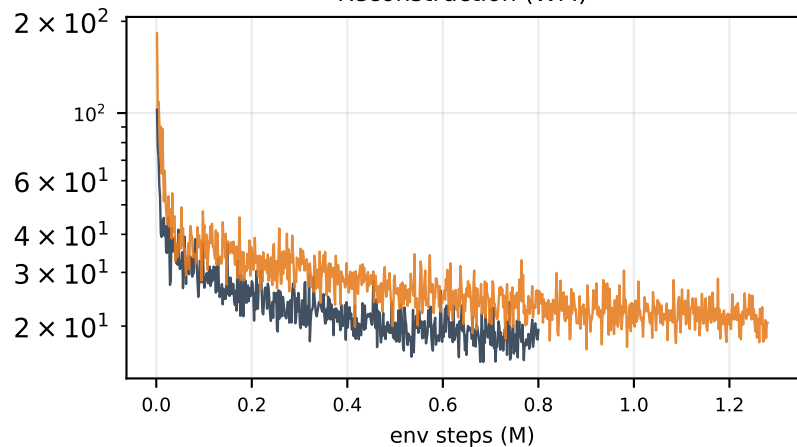

—●— v56-ratio256 — 14.4M params (deter 1280, cnn 16, ratio 256)
 —●— v55-small14m-40k — 14.4M params (deter 1280, cnn 16, ratio 128)

x de réussite par achievement — v56-ratio256 — 14.4M params (deter 1280, cnn 16, ratio

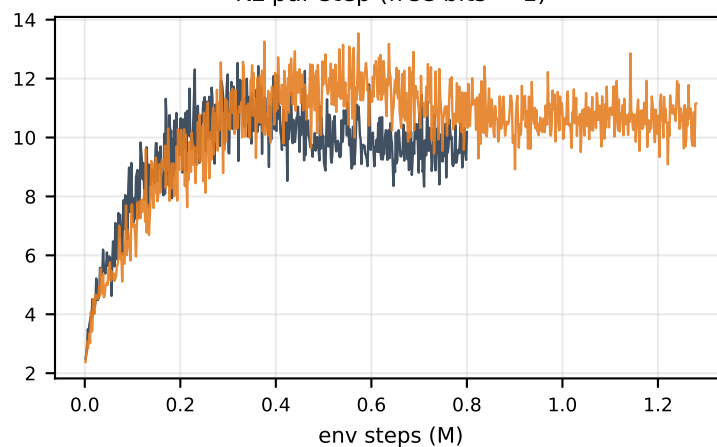

Métriques internes — santé du world model et de l'actor-critic

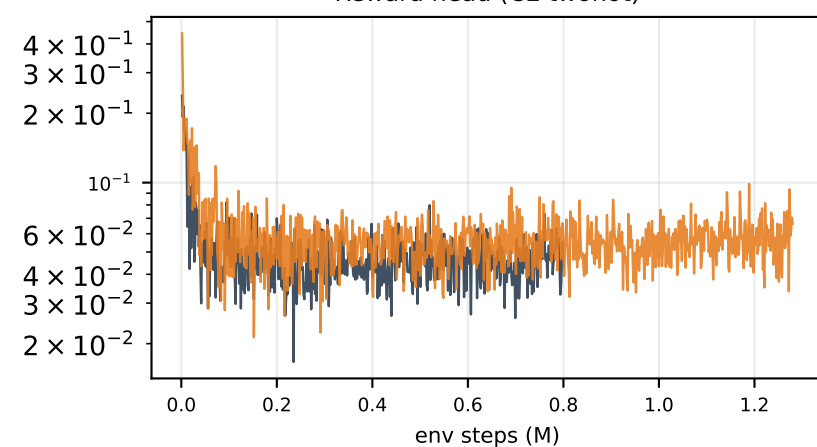

Reconstruction (WM)

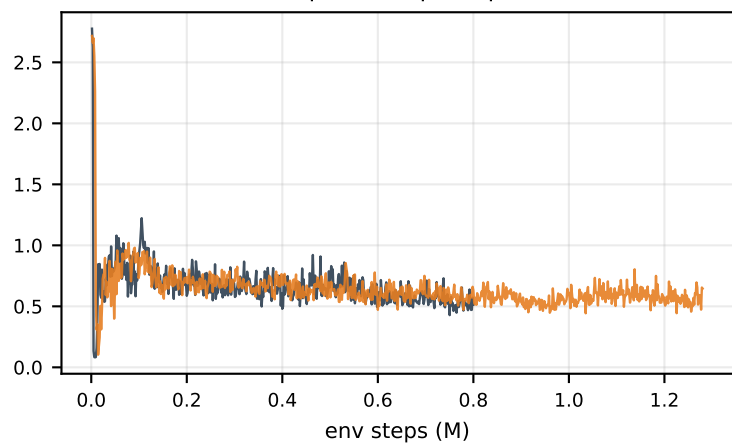

KL par step (free bits = 1)

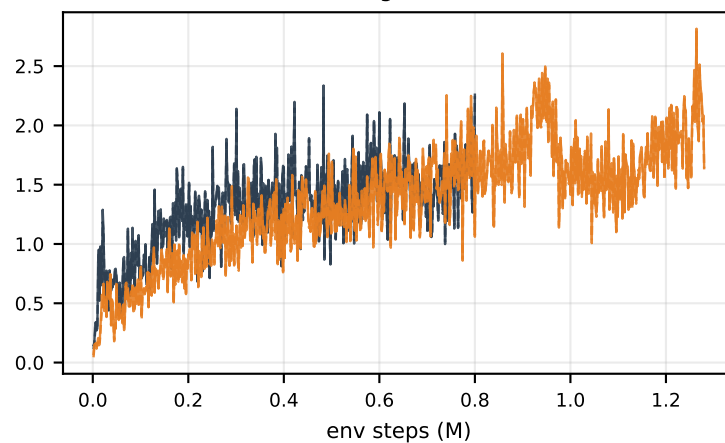

Reward head (CE twohot)

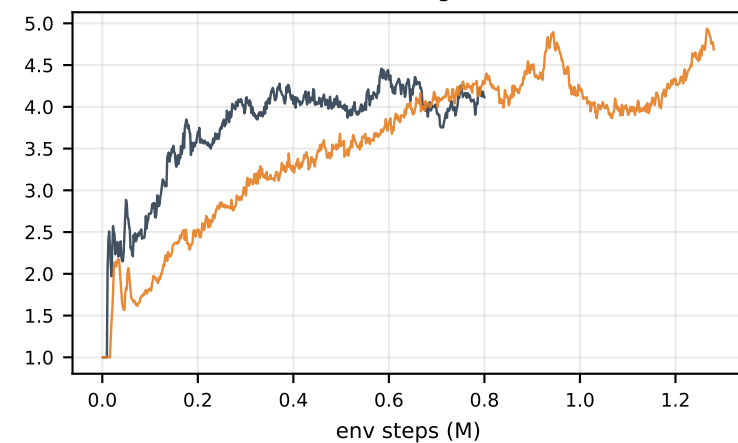

Entropie de la politique H

Returns imaginés vs values

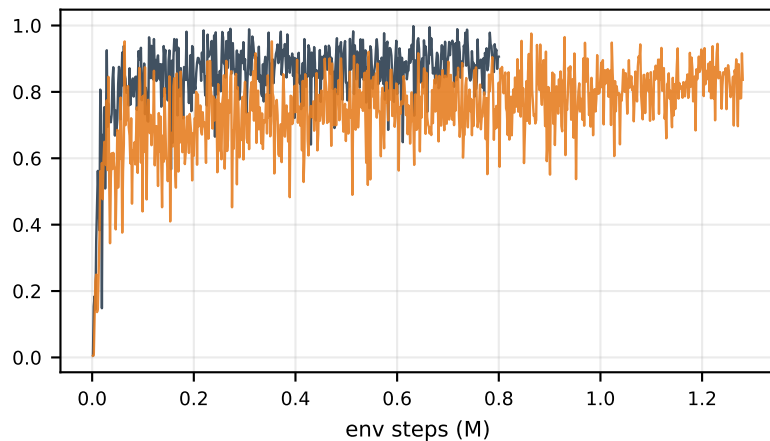

Scale des avantages (P95-P5)

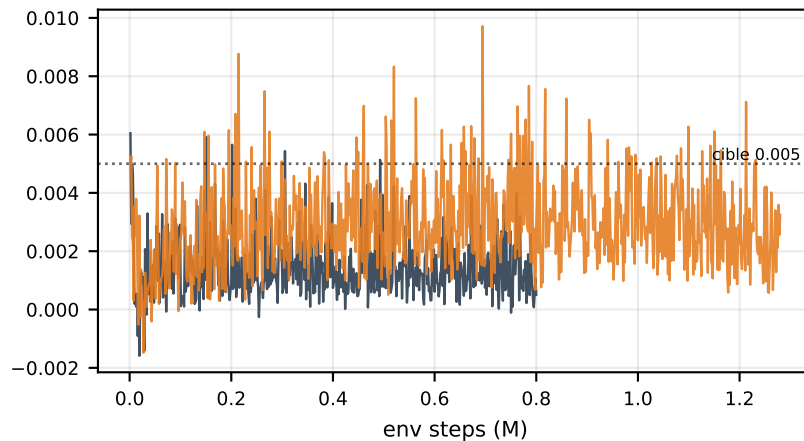

— v56-ratio256 — 14.4M params (deter 1280, cnn 16, ratio 256) — v55-small14m-40k — 14.4M params (deter 1280, cnn 16, ratio 128)

Diagnostics reward head et imagination — le signal que voit l'actor

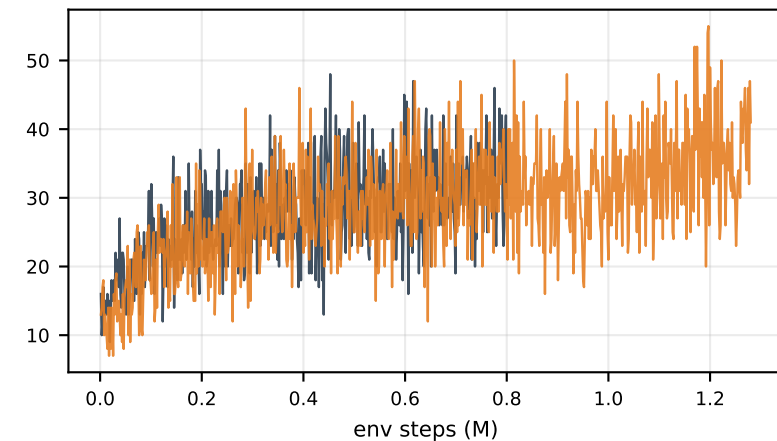

Prediction sur les ACHIEVEMENTS (cible ~1.0)

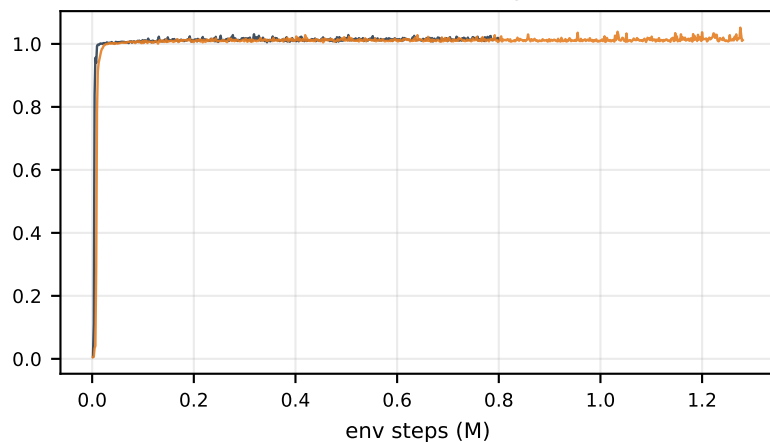

Prediction sur les etats a reward NUL (doit rester ~0)

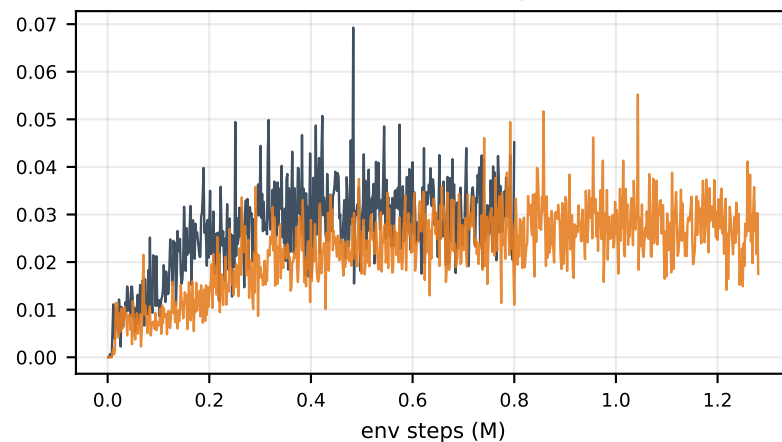

Achievements par batch (densite du replay)

Reward MAX dans l'imagination

Fraction des rewards imagines > 0.5

Reward moyen dans l'imagination
